Event Summary at 1kt

	June.99	Nov.99	Jan.00	Feb.00	Mar.00	May.00*	June.00*
CT (kt) E18 p.o.t	2.60	2.62	1.81	3.74	3.35	2.42	3.16
CT (SK) E18 p.o.t	3.10	3.57	2.22	4.04	3.71	2.56	3.75
nν in 25t	4,282	4,923	3,505	6,986	6,080	3,574	4,745
n1peak	89,782	96,304	67,641	140,740	122,651	74,135	95,652
ntotpeak	109,119	118,321	85,238	177,437	155,778	88,558	114,739
Eff(det)	0.706	0.708	0.719	0.724	0.719	0.718	0.718
B.K.G rate	0.031	0.031	0.015	0.015	0.015	0.015	0.015
Nν	7,150	8,286	6,052	11,985	10,581	7,510	10,021

$$N\nu = (n\nu/n1peak)*ntotpeak*(1/Eff(det)/(1+BKG))$$

* In May and June.00, we have trouble at timing module for FADC and some times we missed 8, 9 bunches. "nν", "n1peak" and "ntotpeak" in these period are results of 7 bunch-analysis. We must multiply another factor

fac(7->9) = 1.282 (May.00)
= 1.283 (June.00)

to calculate Nν and listed number is after this correction.
